

Transform your professional image with NUVU

NUVU

REPORTING SUITE

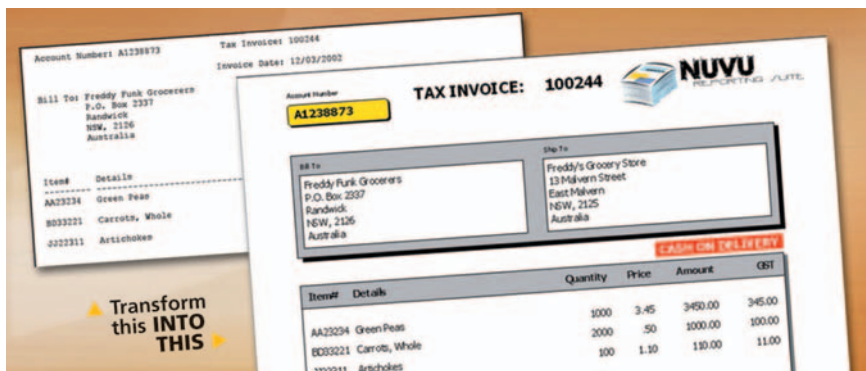

Rapidly transform your print output into graphically rich electronic documents!

If your text-based reporting output is letting down your company image, NUVU Reporting Suite™ will empower you to distribute professional business documents to suit today's modern business needs.

NUVU reads your current application output, filters it through a template that you can easily create, and then changes the output into a modern print, fax, PDF or email layout that your customers demand.

Templates are stored on the NuVu server, and a windows client with access to the necessary output mediums is all that is required.

The perfect solution for professional reports and standard business forms, including those forms that require the purchase of pre-printed stationary, E.G invoices, statements, purchase orders, quotes, letters, picking slips, delivery docketts, and cheques.

Transform your professional image with NUVU!

- intelligently interpreting character-based reports and dynamically transforming them in real time, into a graphical report format
- fully integrated to allow you to email or fax direct from your application
- effectively maintain the business value in your application software
- leverage the value in your legacy software investment even further

Sterland Software

Sterland Software was formed by the Sterland Group, who operate a well established ISV company. The Sterland Group services its widely dispersed customer base within Australia and New Zealand from a centralised Head Office located on the Central Coast of New South Wales, Australia.

Sterland Software understands our customers' businesses better than any other wholesaler, having evolved from an established ISV enterprise, with 20 years IT experience. Sterland's business approach emphasises superior customer service that exceeds the client's expectations, coupled with market leading technical excellence.

Sterland Software:

your preferred partner for application modernisation.

NUVU

REPORTING SUITE

Consider these Benefits

- Rapid Return on Investment - reduces programming costs and eliminates the cost of delivering documents manually.
- Low cost of ownership - uses current network infrastructure.
- Simple Application Integration - no integration required if using Poll engine.
- Powerful and Integrated development model (WYSIWYG - What You See is What You Get).
- Rapid Development process - a typical report can be designed in under 15 minutes.

Consider these Features

- An integrated WYSIWYG Report Designer tool, including:
 - Visual field mapping
 - Reads Text or XML
 - Integrated Fax Cover Page designer
 - Wizards to assist in automated design creation
 - Ability to reuse Templates in other designs
 - Ability to place text, fields, down-fields, rectangles, editor boxes, lines and graphics onto the designer canvas
 - Use any true-type fonts, including specialist Barcode and MICR fonts.
- Delivers graphically rich reports (GUI) in a character terminal environment.

- Deliver reports graphically to the web
- Bundled Poll server - able to poll a nominated Windows printer spool queue as well as a nominated folder
- Bundled Fax server - allowing for seamless faxing of prepared NuVu documents.
- Export displayed results directly into your favourite spreadsheet program, PDF and other formats.
- Email to multiple destinations, fax or print converted reports.
- Automated document 'blasting', where pages are scanned for fax and email fields, and the relevant pages are split and faxed and/or emailed to the identified recipients.
- Powerful searching and zoom capability when viewing reports.
- Free viewer software for client deployment, or alternatively output to PDF format.
- Common Barcode formats natively supported.
- Powerful conditional formatting capabilities - adds intelligence to reports
- Integrated Fax Server, PDF output and Email delivery - no more to pay
- International character set support - ability to convert reports to other languages without changing your application code
- Small footprint
